

NeuroShield-7: Phase III Multicenter Clinical Trial Summary

Sponsor: Aethelgard Therapeutics | Protocol: AG-703-ALZ | Phase: III

1. Primary Endpoint Efficacy & Cohort Demographics

A randomized, double-blind, placebo-controlled study enrolled **2,450 patients** across 68 clinical sites. Patients receiving NeuroShield-7 (10 mg/kg biweekly) demonstrated a statistically significant **34.2% slowing of cognitive decline** measured on the Clinical Dementia Rating-Sum of Boxes (CDR-SB, $p < 0.001$) at 76 weeks.

2. Biomarker Reduction and Safety Profile

Study Arm	Patient Count (n)	CDR-SB Change (76 wks)	Amyloid PET Reduction	ARIA-E Incidence
Placebo	1,225	+1.82 points	-1.2%	1.8%
NeuroShield-7 Low (5mg)	612	+1.38 points (-24.1%)	-58.6%	6.4%
NeuroShield-7 High (10mg)	613	+1.20 points (-34.2%)	-78.4%	8.9%

3. Regulatory Filing Schedule

Biologics License Application (BLA) submission to the US FDA is targeted for **February 18, 2027** under Priority Review designation.
